

OMNIestimate

Plantrोल's **OMNIestimate** is designed to produce quick accurate price estimates and is easy to use, especially for new users with little experience with forms. **OMNIestimate** will quickly calculate estimates based on the required operations, standards, and material costs stored in various tables. These tables can be maintained using a graphical interface to dictate what products and features are available, and at what price they are offered. User screens are shared between price book and cost estimating systems allowing the user to easily convert from price book to cost-up pricing. Templates and default materials speed entry of common items. Freight estimates or delivered prices are calculated using the Plantrोल freight estimator. Using **OMNIestimate**, you can now provide custom form pricing to your customers on your website! With the web quote interface, your own web page designer can create a unique quote request page. When the customer plugs in the quote details and features the software creates and calculates a quote and instantly returns results to the user via the web page.

Price Book Estimating

Enter minimal product specifications and the system will calculate base flat and running charges and additional charges for special materials and features. Pre-calculated tables are also handled. The system manager's user guide provides instruction for modifying pricing tables and rules. New price lists can be easily added or created from cost information. Price book listings can be printed in PDF format.

Cost Estimating

Plantrोल's Expert System stores production standards in IADT (formerly IBFI) PAR format. The Expert System brings the production manager's expertise to the estimator's desktop. The Expert System converts specifications to the production steps required, and calculates the cost estimate. Product mark-up and/or discount tables are also utilized.

Quote Acknowledgments

Estimate confirmations are created in PDF format, easily viewed, e-mailed, faxed or printed from your desktop.

Features

- Simultaneously prices unlimited number of quantities
- Handles Combination Quotes
- Quotes Easily Duplicated for Pricing Combinations or Alternatives
- Checks Inventory Availability
- Stores Quotes for Analysis, Revision and Duplication
- Template System
- Recently created quotations are easily located
- Revision history is maintained
- Quote look up by job number
- Discount tables by customer and/or product
- Controlled security allows access to pricing tables by authorized users only
- Freight estimator option

Cost Estimating Features

- Provides Estimated Hours by Cost Center for Machine Loading & Production Evaluation
- Price Book Quotes Can Easily Be Transformed into Cost Estimates
- Able to compare all presses capable of producing a job
- Determines the most cost effective press based on quantity
- Compares 2 wide vs. 1 wide to find most cost effective method
- Displays last quote and order information

Available System Interfaces
