

Order Entry Commercial

Comprehensive specifications are quickly input and processed with Plantrol's Commercial Printing system. All information is immediately accessible; cumbersome menus are a thing of the past. Capture quote and order specifications simultaneously. Reorders and combination orders are quickly entered with our duplication process. Order history is tracked, including shipping, billing, and cost.

Options

Dramatically reduce input time by integrating the entire production process between Raw Material Inventory, Job Cost, Shipping, and Billing modules. The Order Planning option automatically allocates raw materials and assigns department due dates.

Data Entry

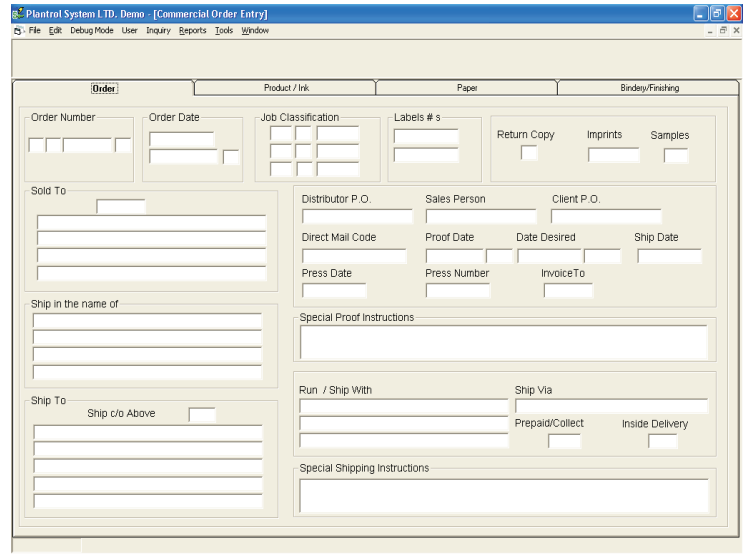

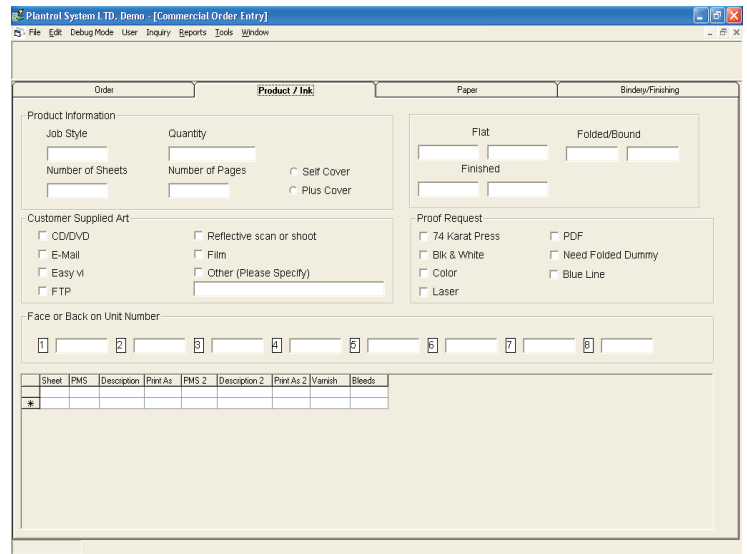

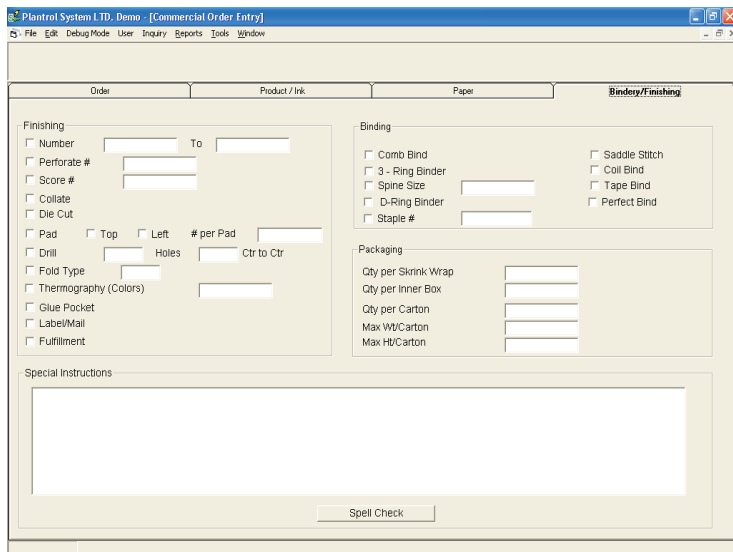

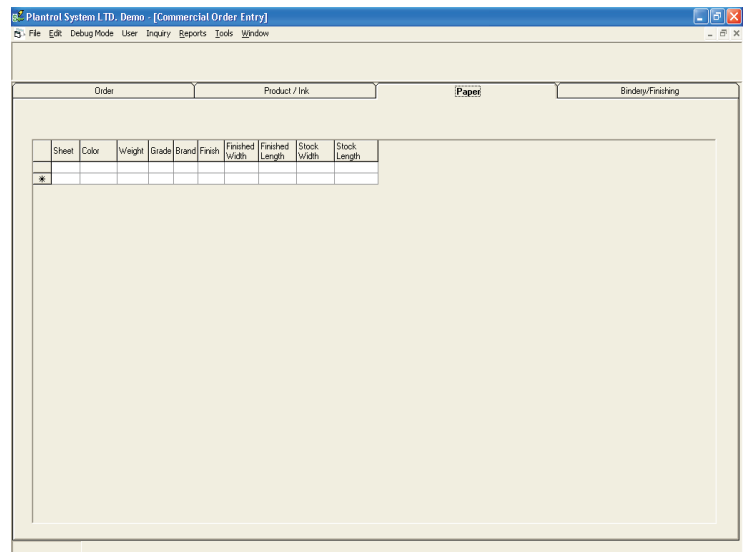

We have designed input screens for all types of production information, including copy preparation, all types of printing, binding and finishing, and free form special instructions. Your system may use all or none of these; we'll work with you to be sure we accommodate your specific needs.

Order Entry Documents

A customized production order/acknowledgement is included in PDF format - easily viewed, e-mailed, faxed or printed from your desktop. These may be bar-coded to speed shop floor data entry if desired. Additional custom reports may also be incorporated.

Standard Features

-  Shorthand keys for frequently used words and features
-  Automatically assigned job numbers (if desired)
-  Easy duplication of order specifications
-  Free form special instructions
-  Job chain inquiry quickly locates most recent order
-  Historic database is maintained

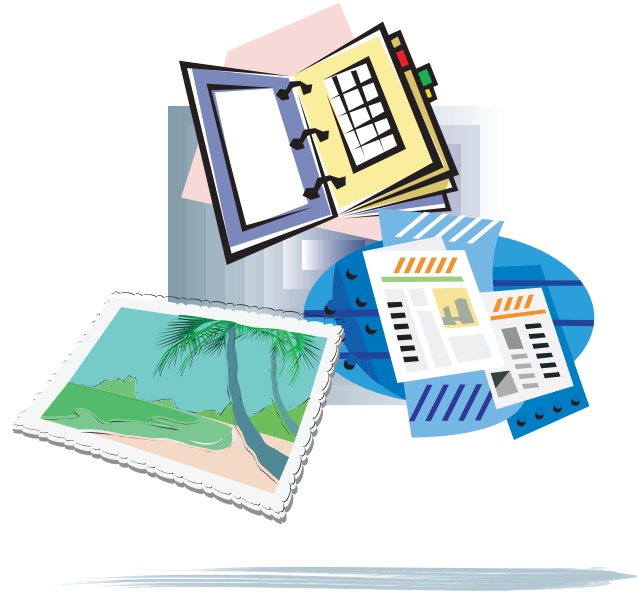

Quote and Order Documents

A production order/acknowledgement and quote confirmation designed for your operations are included in PDF format - easily viewed, e-mailed, faxed or printed from your desktop. These may be bar-coded to speed shop floor data entry if desired. Additional reports may also be designed for your requirements.

Order Entry Commercial

Optional Features

-  Order Planning - Automatically calculates material requirements and schedules departmental due dates
-  Raw Material Inventory Interface - Available materials are determined in real time. Sheet and/or roll paper, cartons, and other materials are immediately allocated.
-  Order Status - Quickly determine an order's current status for customer inquiries. This feature requires a Job Cost interface. With Shop Floor Data Collection the information is updated in real time.
-  Job Cost Interface - As production steps are completed, status inquiries are updated with current information. Provides backlog and scheduling reports
-  Shipping Interface - When the shipper inputs or scans the job number, all order information is immediately displayed, including description, shipping addresses and routing information. When the shipment has been processed, status inquiries display shipping status and tracking numbers.

Standard Features

-  Shortcut keys for frequently used words and features
-  Automatically assigned job numbers (if desired)
-  Easy duplication of order specifications
-  Free form special instructions
-  Quickly locates most recent order by job chain inquiry
-  Historic database is maintained
